

IN THE CLAIMS

1. (currently amended) An A first surface optical storage disc, comprising:

a circular substrate having a first principal surface and an opposing second principal surface;

bumps formed on a first portion of the first principal surface circular substrate, wherein the bumps represent pre-recorded information;

lands formed on a second portion of the first principal surface circular substrate; and

a phase-change material deposited on ~~at least the~~ first portion and the second portion of the first principal surface substrate; and

a dielectric layer sputtered over the phase-change material; the first surface disk having no additional layers overlaying the dielectric layer, wherein a data density of the first portion is less than a data density of the second portion, the phase-change material having a first state when unwritten and a second state when written to, wherein information is written only to the phase-change material on the lands, and wherein the data density of the first portion and the second portion is different, and wherein the first and second states are different physical states.

6. (cancelled)

7. (currently amended) The disc of Claim [[6]] 1, wherein the phase-change material is an alloy of Sb, In, and Sn.

8. (cancelled)

9. (cancelled)

10. (Original) The disc of Claim 1, wherein the outer diameter of the disc is approximately 50 mm or less.

11. (Original) The disc of Claim 10, wherein the outer diameter of the disc is approximately 32 mm or less.

12. (Original) The disc of Claim 1, wherein the thickness of the disc is approximately 0.6 mm or less.
